Fluorescence and phosphorescence are proving to be extremely sensitive probes for elucidating conformation of proteins and nucleic acids and for studying molecular interactions. Newer instrumentation and techniques hold forth great promise for the future of these luminescence methods in biopolymer research. It must be noted, however, that the discovery that certain amino acids, purines, and pyrimidines emit fluorescence or phosphorescence is relatively recent, occurring within the last decade. Professor Konev is one of the pioneers in the application of these procedures to biopolymers and is highly qualified to write about this subject. This book, though written largely as a monograph of the author's own contributions, is also an excellent review of the subject. Of particular interest are the references to many important Russian papers in this field which have not been recognized in the Western literature. It is apparent from this book that fluorescence and phosphorescence methods are being used about as widely in Russia as elsewhere in the world and that we must not overlook these important contributions. Konev's studies on protein fluorescence have been widely

recognized. It is of interest to learn about these and other of his applications. The last part of the book, which deals with fluorescence as a means to probe into the structure and conformation of macromolecules in intact cells, is most interesting. Aside from published symposia this book is the first written specifically about luminescence of biopolymers. Sidney Udenfriend Bethesda. Maryland May, 1967 v CONTENTS Introduction . . . . .

Explains that the static stability factor is an indicator of a vehicle's propensity to roll over, and that US government ratings for vehicles do not reflect differences in rollover resistance. This report states that the 5-star system should allow discrimination among vehicles and incorporate results from road tests that measure vehicle control.

3 simple strategies to earn high returns and beat the professionals Would you like to use a simple, low-risk investing system that beats market indexes and fund manager performance over the long term, but requires only a few minutes of your time each month? Does it sound like a lot of hard work? It's not - even the laziest investor can achieve it. The Idle Investor includes three straightforward DIY strategies for long-term investing. All you have to do is follow the simple rules. Each method requires only a limited amount of your time and they all make

use of easily accessible, low-cost funds. The reasons why the strategies work and everything else you need to know to put them into practice is explained clearly, with numerous worked examples. The three strategies are: 1. The Bone Idle Strategy: Part of your portfolio is allocated to shares and part is allocated to bonds, with adjustments only required twice a year. The rest of the time you do nothing. 2. The Summer Hibernation Strategy: For part of the year your portfolio is allocated to shares and for part of the year it is allocated to bonds. Once again, adjustments to the portfolio are only required twice per year. The rest of the time you do nothing. 3. Multi-Asset Trending Strategy: A simple trend-following method determines whether to hold your portfolio in shares or bonds. For this strategy you will need to check your investments and make adjustments once a month. Even on the very few occasions each year when action is required - twice a year for strategies 1 and 2, and once a month for strategy 3 - you'll only spend a few minutes checking your portfolio and making simple changes. The activity levels range from yearly rebalancing, for the laziest investor, through to monthly reallocation, for those who are more active. How much you do depends on how lazy you are feeling. Testing the three Idle Investor strategies for the period 1990 to 2012 resulted in average annual returns of up to 28%. Compare this to a buy-

and-hold approach of investing in UK shares, which would have delivered 8.5% per year over the same period, and you can see that being idle doesn't mean being unsuccessful! If you are looking for a straightforward investing method that lets you get on with your life while your money grows in the background, then become an Idle Investor.

How do the rich get rich? An updated edition of the "remarkable" New York Times bestseller, based on two decades of research (The Washington Post). Most of the truly wealthy in the United States don't live in Beverly Hills or on Park Avenue. They live next door. America's wealthy seldom get that way through an inheritance or an advanced degree. They bargain-shop for used cars, raise children who don't realize how rich their families are, and reject a lifestyle of flashy exhibitionism and competitive spending. In fact, the glamorous people many of us think of as "rich" are actually a tiny minority of America's truly wealthy citizens—and behave quite differently than the majority. At the time of its first publication, *The Millionaire Next Door* was a groundbreaking examination of America's rich—exposing for the first time the seven common qualities that appear over and over among this exclusive demographic. This edition includes a new foreword by Dr. Thomas
