In the United States there are several thousand devices containing high-activity radiation sources licensed for use in areas ranging from

medical uses
such as cancer
therapy to
safety uses such
as testing of
structures and

The study
concludes that
the U.S.
government
should consider
factors such as
potential
economic
consequences of
misuse of the

sources into its assessments of risk. Although the committee found that replacements of most sources are possible, it is not economically feasible in some cases. The committee recommends that

The committee
