The challenges to humanity posed by the digital future, the first detailed examination of the unprecedented form of power called "surveillance capitalism," and the quest by powerful corporations to predict and control our behavior. In this masterwork of original thinking and research, Shoshana Zuboff provides startling insights into the phenomenon that she has named surveillance capitalism. The stakes could not be higher: a global architecture of behavior modification threatens human nature in the twenty-first century just as industrial capitalism disfigured the natural world in the twentieth. Zuboff vividly brings to life the consequences as surveillance capitalism advances from Silicon Valley into every economic sector. Vast wealth and power are accumulated in ominous new "behavioral futures markets," where predictions about our behavior are bought and sold, and the production of goods and services is subordinated to a new "means of behavioral modification." The threat has shifted from a totalitarian Big Brother state to a ubiquitous digital architecture: a "Big Other" operating in the interests of surveillance capital. Here is the crucible of an unprecedented form of power marked by extreme concentrations of knowledge and free from democratic oversight. Zuboff's comprehensive and moving analysis lays bare the threats to twenty-first century society: a controlled "hive" of total connection that seduces with promises of total certainty for maximum profit -- at the expense of democracy, freedom, and our human future. With little resistance from law or society, surveillance capitalism is on the verge of dominating the social order and shaping the digital future -- if we let it.

The Whitbread Prize-winning author of *Oranges Are Not the Only Fruit* delivers a novel that "transports us to something like the future of our own planet" (The Washington Post Book World). On the airwaves, all the talk is of the new blue planet—pristine and habitable, like our own was sixty-five million years ago, before we took it to the edge of destruction. Off the air, Billie Crusoe and the renegade Robo sapien Spike are falling in love. Along with Captain Handsome and Pink, they're assigned to colonize the new blue planet. But when a technical maneuver intended to make it inhabitable backfires, Billie and Spike's flight to the future becomes a surprising return to the distant past—"Everything is imprinted forever with what it once was." What will happen when their story combines with the world's story? Will they—and we—ever find a safe landing place? Playful, passionate, polemical, and frequently very funny, *The Stone Gods* will change forever the stories we tell about the earth, about love, and about stories themselves. "Scary, beautiful, witty and wistful by turns, dipping into the known past as it explores potential futures." —The New York Times Book Review "[A book] that you don't so much read as drink in, refuse to put down, cast inside of like a hunting dog, seeking against all odds the insight that will illuminate everything, a true answer to the fix we're in." —Los Angeles Times "A vivid, cautionary tale—or, more precisely, a keen lament for our irremediably incautious species." —Ursula K. Le Guin, bestselling author of *Changing Planes*

Speculate This! is a concise, provocative manifesto advocating practices of "affirmative speculation" over and against contemporary forms of speculation that quantify and contain risk to generate financial profit for a privileged few. This latter mode of speculation is predatory and

familiar, its fallout evident in ongoing environmental degradation, in restrictive legal claims on natural resources in distant lands, and in the foreclosures, evictions, and unemployment resulting from the financial collapse of 2007–08. While such exploitive speculation seeks to reduce uncertainty and pin down the future, the affirmative practices championed by the authors of *Speculate This!* engage uncertainty, contingency, and difference, and they multiply, rather than reduce, possible futures. In these affirmative practices, social relations and the creation of goods and knowledge are not driven by the desire for financial gain or professional status. Whether manifest in open-source software, eco-communes, global activist movements, community credit networks, or experimental art, speculative living affirms our commonality. As a collaborative work coauthored by a group of anonymous scholars, *Speculate This!* argues for and embodies affirmative speculation.

In a time of great agricultural and rural change, the notion of 'multifunctionality' has remained under-theorized and poorly linked to the debates in the social sciences. This book analyses the extent to which the proposed transition towards post-productivist agriculture holds up to scientific scrutiny, and proposes a new transition theory.

Before Paulo Coelho and Eckhart Tolle came Rodney Collin. A huge 466 page book full of essential knowledge. *How To Become Supernatural Man, The Universe and Cosmic Mystery* is an exploration of the universe and man's place in it. Rodney Collin examines 20th-century scientific discoveries and traditional esoteric teachings and concludes that the driving force behind everything is neither procreation nor survival, but expansion of awareness. Collin sets out to reconcile the considerable contradictions of the rational and imaginative minds and of the ways we see the external world versus our inner selves. For readers familiar with Gurdjieff's cosmology will here find further examinations of the systems outlined in by Ouspensky in *Search of the Miraculous*.

From the Cold War through today, the U.S. has quietly assisted dozens of regimes around the world in suppressing civil unrest and securing the conditions for the smooth operation of capitalism. Casting a new light on American empire, *Badges Without Borders* shows, for the first time, that the very same people charged with global counterinsurgency also militarized American policing at home. In this groundbreaking exposé, Stuart Schrader shows how the United States projected imperial power overseas through police training and technical assistance—and how this effort reverberated to shape the policing of city streets at home. Examining diverse records, from recently declassified national security and intelligence materials to police textbooks and professional magazines, Schrader reveals how U.S. police leaders envisioned the beat to be as wide as the globe and worked to put everyday policing at the core of the Cold War project of counterinsurgency. A “smoking gun” book, *Badges without Borders* offers a new account of the War on Crime, “law and order” politics, and global counterinsurgency, revealing the connections between foreign and domestic racial control.

At the onset of the Great Recession, as house prices sank and joblessness soared, many commentators concluded that the economic convictions behind the disaster would now be consigned to history. And yet, in the harsh light of a new day, we've awoken to a second nightmare more ghastly than the first- a political class still blaming government intervention, a global drive for austerity, stagflation, and an international sovereign debt crisis. Philip Mirowski finds an apt comparison to this situation in classic studies of cognitive dissonance. He concludes that neoliberal thought has become so pervasive that any countervailing evidence serves only to further convince disciples of its ultimate truth. Once neoliberalism became a Theory of Everything, providing a revolutionary account of self, knowledge, information, markets, and government, it could no longer be falsified by anything as trifling as data from the 'real' economy.
