Convergence of Probability Measures by Patrick Billingsley. Theorem 9. If S is separable and complete, then each probability measure on S is tight. Proof. Fix any $\epsilon > 0$. Since S is separable, for each $k \in \mathbb{N}$, by taking open $1/k$ -balls centered at the countable dense subset, we get a sequence of open sets. $A_{k,1}, A_{k,2}, \dots$ that cover S .
