World History Teaching in Asia is the first broad survey of the content and approaches used to teach world history in secondary schools and colleges in Asia. The collection has been crafted by scholars and educators whose goal was to shed light on the importance of history education and to foster understanding of and between Asian countries. These essays show how the teaching of world history in Asian countries has developed since World War II, with many interesting parallels, including the issue of Eurocentrism, but also distinctive national trends, and considerable changes over time. At a time when many Asian countries are making great strides in education, this study of history education in Asia will be of real interest to educators, history scholars, and policy-makers worldwide.

This textbook has been in constant use since 1980, and this edition represents the first major revision of this text since the second edition. It was time to select, make hard choices of material, polish, refine, and fill in where needed. Much has been rewritten to be even cleaner and clearer, new features have been introduced, and some peripheral topics have been removed. The authors continue to provide real-world, technical applications that promote intuitive reader learning. Numerous fully worked examples and boxed and numbered formulas give students the essential practice they need to learn mathematics. Computer projects are given when appropriate, including BASIC, spreadsheets, computer algebra systems, and computer-assisted drafting. The graphing calculator has been fully integrated and calculator screens are given to introduce computations. Everything the technical student may need is included, with the emphasis always on clarity and practical applications.

Driven by the Standards for Technological Literacy, this National Science Foundation-sponsored book is written by national leaders in engineering and technology education and addresses the most contemporary technological content using engaging, pedagogically sound “informed design” activities. This unique approach encourages students to develop a thorough understanding of engineering and technology before they ever attempt to develop detailed design solutions. The activities present students with a design problem, and prompt students to begin the solution-finding process with research, inquiry, and analysis. Only after this important step can students begin to discuss specifications and constraints, propose alternatives, and select an optimal design. This process fosters a strong student-teacher discourse and cultivates language proficiency, both with the end result of enhancing student’s overall knowledge. Testing, evaluation, and modifications are addressed next, followed by a communication of achievements in a class presentation and final design report. Woven throughout the text are passages that will acquaint students with the requirements, responsibilities, necessary personal attributes and attitudes, and educational pathways that will lead to success in the various technological areas. In this wide-ranging history of modern Britain, Eric Evans surveys every aspect of the period in which Britain was transformed into the world's first industrial power. By the end of the nineteenth century, Britain was still ruled by wealthy landowners, but the world over which they presided had been utterly transformed. It was an era of revolutionary change unparalleled in Britain - yet that change was achieved without political revolution. Ranging across the developing empire, and dealing with such central institutions as the church, education, health, finance and rural and urban life, The Shaping of Modern Britain provides an unparalleled account of Britain's rise to superpower status. Particular attention is given to the Great Reform Act of 1832, and the implications of the 1867 Reform Act are assessed. The book discusses: - the growing role of the central state in domestic policy making - the emergence of the Labour party - the Great Depression - the acquisition of a vast territorial empire Comprehensive, informed and engagingly written, The Shaping of Modern Britain will be an invaluable introduction for students of this key period of British history.

Revelation is generally considered something external, explosive. In this book, Bruce Frantzis, renowned chi master and author, challenges readers to embark on an inner revolution to reclaim joy and happiness in life, reverse the effects of aging and release their stress and negative emotions. Chi adepts can consciously feel and work with all the acupuncture meridians, internal organs and other structures in their own bodies. Yet these are skills that most Westerners would consider to be something out of science fiction and absolutely impossible to achieve in real life. Drawing on forty years of training in ancient Chinese practices, Frantzis provides readers with new and startling insights about how life-force energy—chi—can help them achieve enduring health and wellbeing. “The smooth, balanced flow of your life-force energy is the single most important determinant to your health, vitality and happiness,” he says. Instead of the “no pain, no gain,” mantra of our over-caffinated, stressed out culture, Frantzis gives readers energetic fitness exercises that comprise the unique Chi Rev Workout™. These transformative exercises teach readers to activate and strengthen their chi and to relax their nervous systems. “The more you relax, the more health, stamina and strength you will have,” says Frantzis. Frantzis reveals how once closely guarded and ancient secrets of chi are the power behind: —Spirituality, prayer and meditation. —Acupuncture and the potent self-healing methods of chi gung (qigong) and Taoist yoga. —Enhanced sexual vitality and intimate relationships. —Internal martial arts, such as tai chi. —Divination methods of the I Ching.
