How do human emotions arise, what functions do they serve, what is their evolutionary background, how do they relate to behaviour and the brain? These questions are put, and answered, in relation to the emotion of fear in this, the second edition of professor Gray's extremely well known book, first published in 1971. In this edition, the text has been extensively modified and brought up-to-date, but the book maintains the style and general argument of the first edition. The author's approach in this book is from a biological standpoint; he emphasises the evidence that has accumulated from experiments by psychologists, ethologists, physiologists and endocrinologists. Although a lot of this evidence has been obtained from animal studies, it throws light on the psychology and physiology of fear in Man. Differences between individuals in their susceptibility to fear are treated

Since the first edition of Principles of Behavior, the authors have sought to address the unique needs of students. This title has been written so that students of all levels will benefit from a solid introduction to the principles of behavior. The authors have laid the ground work for behavior analysis through an exploration of experimental, applied, and theoretical concepts. Case studies and everyday examples help readers apply principles of behavior to real life.

This book draws on fields as diverse as biochemistry, physiology, pharmacology, psychology, psychiatry, and ethology, to form a fascinating synthesis of information on the nature of fear and of panic and anxiety disorders. Dr. Marks offers both a detailed discussion of

the clinical aspects of fear-related syndromes and a broad exploration of the sources and mechanisms of fear and defensive behavior. Dealing first with normal fear, he establishes a firm, scientific basis for understanding it. He then presents a thorough analysis of the development, symptoms and treatment of fear-related syndromes. Phobic and obsessive-compulsive disorders are examined in detail. The book is illustrated with examples of fear and defensive behavior in other living organisms. By drawing provocative analogies between animal and human behavior, it sheds new light on the origins of fears, phobias, and obsessive-compulsive problems, as well as on their treatment by drugs and psychological means. Clinical psychologists, ethologists, and anyone interested in the mechanisms of behavior will be fascinated by this authoritative study. The text is intriguing and informative, and the bibliography of over 2,100 entries makes it an

invaluable reference.

For ten days, a number of neuroscientists met at Reissburg to attend a series of lectures and discussions, an Institute, on animal learning. The students were drawn from a wide variety of disciplines, including anatomy, biochemistry, pharmacology, physiology and zoology. It is probably true to say that many of them had at best a sketchy knowledge about the learning behavior of animals, about the conditions which are necessary for learning to take place and about the theories that psychologists have constructed about the learning processes. Was the Institute of any benefit to those neuroscientists whose interests lay in studying the functioning of the nervous system by manipulating it or probing it in some direct way? Some twenty years ago the answer to this question would probably have been "No"; and

there is a very good reason why this view might have been held, especially by students of the mammalian nervous system. At that time most investigators used anaesthetised animals, or animals immobilized in some other way such as by surgically isolating the brain from the spinal cord, by dividing the brain at various levels or through the use of paralyzing agents. These conditions achieved two things. On the one hand, they allowed substantial advances to be made, particularly in the analysis of sensory processing and in the analysis of the neuronal mechanisms of relatively simple reflex action. On the other hand, the experimental conditions virtually eliminated complex behavior.
