This package includes both HM ClassPrep and HM Testing. It allows an instructor to access both lecture aids and testing software in one place. These components cannot be ordered separately. HM ClassPrep offers instructors everything they need to develop their lectures:PowerPoint slides with all line art from the text, Word and PDF files of the Instructor's Resource Guide and Instructor's Resource Guide for the Lab Manual, and Word files of the Test Bank. The Instructor's Resource Guide offers a transition guide, tables suggesting the approximate number of lectures to devote to each chapter, summaries of the worked examples and problems, a chapter-by-chapter outline listing those sections that are most important as well as those that may be skipped or assigned as optional, and answers to the review problems on synthesis featured in the Study Guide and Solutions Manual. The Instructor's Guide for the Lab Manual contains detailed discussions of the experiments in the laboratory manual and answers to the laboratory questions. The Test Bank includes approximately 730 multiple-choice test questions with an accompanying answer key. HM Testing by Diploma combines a flexible test-editing program with a comprehensive gradebook function for easy administration and tracking. HM Testing enables instructors to administer tests via print, network server, or the web. Questions can be customized based on the chapter being covered, the question format, level of difficulty, and specific topics. HM Testing provides for the utmost security in accessing both test questions and grades.

With a focus on real-world applications and a conversational tone, this laboratory manual contains experiments written specifically to correspond with Chemistry: A Molecular Approach, Third Edition by Nivaldo J. Tro. Each experiment covers one or more topics discussed within a chapter of the textbook, with the dual goal of 1) helping students understand the underlying concepts covered in the lecture course, and 2) presenting this material in a way that is interesting and exciting. This manual contains twenty-eight experiments with a focus on real world applications. Each experiment contains a set of pre-laboratory questions, an introduction, a step-by-step procedure (including safety information), and a report section featuring post-laboratory questions. Additional features include a section on laboratory safety rules, an overview on general techniques and equipment, as well as a detailed tutorial on graphing data in Excel.

Each experiment in this manual was selected to match topics in your textbook and includes an introduction, a procedure, a page of pre-lab exercises about the concepts the lab illustrates, and a report form. Some have a scenario that places the experiment in a real-world context. For this edition, minor updates have been made to the lab manual to address some safety concerns.

This project aims to supply a full lab manual and grading key for Organic Chemistry II, a class often taken by sophomores in Liberty University's science degree programs. Properly applied laboratory experiments create a beneficial learning environment for science students by using hands-on procedures to transform intangible lecture concepts into concrete demonstrations. Lab work also fosters the development of problem-solving and critical-thinking skills that students need in research and the workplace. Thus, having a comprehensive lab manual is critical to students' success and understanding in this upper-level class. This project adds to the experiments of Organic Chemistry II lab through procedural updates, conceptual introductions to experiments, and supplemental information for the students. Additionally, weekly grading keys for teacher's assistants have been created for better assessment of each student's knowledge. To prevent lab experiments from becoming isolated without a practical application, an introduction was written for each week that creates a clear connection between lab work and class concepts. Supplemental information was created to suggest review topics, lab technique cautions, and areas of data discussion required for success in weekly assignments. The main goal of this was to improve the comprehension, and consequently the grades, of students in their notebook and formal lab report assignments. An answer key for weekly assignments was also designed for standardized grading among teacher's assistants. Objective answers for notebook assignments were included such as safety hazards for reagents, literature values and calculations for reagent tables, product theoretical yields, and expected results for analytical techniques.
