and Design series provides concise information on the subject alongside a wealth of inspiration. It offers an overview of materials suited to particular components of a building - including walls, ceiling, and floors - and objects. Both traditional and new materials are described in a knowledgeable and practical manner. It is not only a material itself that determines the appearance of a surface, but also the design and arrangement of the joins. After a material's surface, the chosen laying pattern is the next key aspect that influences its spatial effect. The book, therefore, includes a wide range of different laying patterns. It conveys fundamental knowledge of materials and their application, and thus serves as a reference book, a sampling guide, and a compendium for students.

The drawing architect – for centuries, this term was just as tautological as the 'baking baker' or the 'gardening gardener'. Nevertheless, in this compendium one has to begin with reference to the fact that the acquisition of drawing skills is by no means a minor field of study for architects. Design methodology, also referred to as methodology of space and the representation of the human body, plays an important role – once more – in the present-day field of architectural activity. This book explores options for illustration, as well as contemporary practice with architectural presentation. It deals with the following topics: The history and theory of architectural drawing, covering a wide spectrum of issues in terms of art and architectural history, examples are provided by two design collections; ten architects present their architectural concepts based on a selection of drawing and presentation techniques; ten exercises for freehand drawing; demonstrative examples and practical exercises which illustrate technical drawing and the fundamental principles of perspective.

Professional architectural photography confronts architects and photographers with challenges, which this volume in the Construction and Design Manual series deals with in detail. After an introduction to the history and the various areas in which architectural photography is used, the authors, themselves professionals working in the fields of building and documentation, address the technical and design-related aspects. They discuss the best equipment for the job as well as such vital issues as focal length, perspective, white balance, filters, HDR and digital post-processing on the computer. The practical section describes with clarity and precision just how the theory should be applied in practice.

La 4e de couv. indique "Architects use diagrams every day - as sketches they are convenient tools for quickly demonstrating a point, as worked through representations they present complex ideas simply and attractively for clients, and as graphics they cross language barriers. Their theoretical background is, however, not quite so well known. Alongside offering inspiring examples of these multifaceted visualisations, this volume explores some of the associated history and theory. How is the diagram a place where architecture and philosophy meet? In what ways can we critically examine their analogue and digital forms? Is the history of the diagram over? Citing the ideas of, among others, Peter Eisenman and Gilles Deleuze the philosopher Lidia Gasperoni investigates diagrammatic practices in architectural design in her absorbing introductory essay. Part of the Construction and Design Manuals series, Architectural Diagrams 2 is a practical guide for those working in creative disciplines: over 312 pages it covers the fields of architecture, interior design, and installation, with both images

and quotes from carefully selected contemporary practitioners."

Flexibility, safety and accessibility: in addition to the current technical, energy and environmental standards, school buildings require innovative structural solutions which extend far beyond the building design. The authors guide the reader through the cultural development of school buildings, presenting stakeholders as well as historical and contemporary learning concepts, defining organizational tasks, formulating quality standards of contemporary learning and working as well as presenting typologies and spatial organizational models, which were created in cooperation with the foundation, the Montag Stiftung, as part of the project Guidelines for Productive School Buildings. 32 international school buildings are presented through detailed drawings and photographs, arranged according to their levels of education. Ten design parameters for school construction round off this practical design manual. With contributions by Natascha Meuser, Hans Wolfgang Hoffmann, Thomas Müller and Jochem Schneider

Prefabricated housing is a pressing issue--for those looking for affordable homes as well as for refugees fleeing wars or natural disasters. In common with politicians, architects were caught unawares by the largest wave of migration since the end of the Second World War. However, are tent cities and containers the best solution for cheap, dignified, and quickly assembled accommodation for displaced persons? This challenging situation, along with the changing urban landscape, with its ever diminishing space, calls into question existing standards in relation to serial housing. Bold and unconventional ideas are called for if architects are to offer high-quality solutions. From eccentric experiments all the way to projects that have already been realized, international design teams present their work between the twin poles of

unconventional developments and life-saving shelters in this volume spanning more than 250 pages. Introduced with articles on design principles, and divided into three sections according to the form the structures take when delivered - cuboid, panels and custom units - the book covers everything from playful follies to architectural constructions for the homeless and outpatient medical stations which offer a response to social problems and space shortages. The text, photographs and plans put forward ideas as to how more can be done than the mere assembling of containers. Should we not first consider notions bordering on the absurd in order to come up with workable solutions for housing today?
