Data Structures in C are used to store data in an organised and efficient manner. The C Programming language has many data structures like an array, stack, queue, linked list, tree, etc. A programmer selects an appropriate data structure and uses it according to their convenience. Let us look into some of these data structures: Array; Stack ; Queue

Similarly structure is another user defined data type available in C that allows to combine data items of different kinds. Structures are used to represent a record. Suppose you want to keep track of your books in a library. You might want to track the following attributes about each book - Title; Author; Subject; Book ID; Defining a Structure. To define a structure, you must use the struct statement. The struct statement defines a new data type, with more than one member.
