~~Everyday Rails Testing with
RSpec by Aaron Sumner~~

To start, add `rspec-retry` to the test group in your Gemfile, then bundle install to add it. Then, configure RSpec to use it—I prefer to do this in a separate file like

`spec/support/rspec_retry.rb`, but you can also include it in your main `spec/rails_helper.rb` file, as shown in `rspec-retry`'s README. Whatever works for you.

~~Work around flaky test failures in Rails with rspec-~~

~~retry ...~~

```
group :development, :test do
  gem 'rspec-rails', '~>
  3.6.0' # leave other gems
  provided by Rails end
If you're reworking with your own, existing application, this might look a little different for you. You'll want to include the rspec-rails dependency in such a way that it loads in both the Rails development and test
```

~~everydayrails/rspec_rails_4:
Everyday Rails ...~~

By Aaron Sumner, November 20, 2017. File under: rspec . After the Rails core team announced major changes to controller-level testing upon the release of Rails 5.0, I wrote a couple of pieces in Everyday Rails about how to shift testing responsibility up, to either request specs, or browser-based feature specs (or system specs, in the current Rails testing landscape).

Using RSpec in Rails application requires rspec-rails gem to be added to your project. In doing so the dependent rspec gem is added to the project automatically. When the rspec-rails gem is added, the corresponding generator rspec:install appears in the list of available generators.
