As a method of standardizing the process, manufacturers use ISO 100 a nd a flash-to-subject distance of 10' as fixed reference points when calibrating guide numbers. An example of this formula: a flash unit with a GN of 40 would require an aperture of f/4 at a subject-to-flash distance of 10' (GN = 10' x f/4 = 40). Note: Some less-than-scrupulous (and invariably third-party) manufacturers use ISO 200 as their base, which automatically increases the apparent power of the flash unit.

~~Understanding Guide Numbers - B&H Explore~~

In short, guide numbers on a flash indicate how much light that flash can produce. You'll see them in the specs indicated in either meters or feet. The higher the guide number the further the flash will reach. The specifications will also show the flash settings at which the guide number is calculated, including the ISO and flash zoom setting.

~~Guide Numbers Explained for Manual Flash - Calculator - -~~

The magnitude of guide numbers is a function of the following four variables: The total luminous energy (in lumen-seconds) emitted by the flash head (which is itself the product of the duration and... The solid angle subtended by the circular- or rectangular-profile beam as it leaves the flash head ...

~~Guide Number For Flash Explain - chimerayanartas.com~~

Guide Number is a solution to deal with the Inverse Square Law. Flash intensity falls off with distance. Guide Number (GN) is a numerical method used to determine exposure of direct flash for Manual flash power levels, to automatically deal with the Inverse Square Law, making the math be trivial.

~~Understanding Camera Flash Guide Numbers, plus GN Calculator~~

A flash's power is determined by its Guide Number, with low Guide Numbers (GN) indicating a weak or less powerful flash than one with a high GN. For ease of comparison, most flash GNs are rated for an ISO 100 film. If you use a film with a lower ISO the GN will be lower, and, conversely, if you use a higher speed film the GN will be higher.

~~Flash Photography - Understanding Guide Numbers~~

Your flash's Guide Number (GN) is determined at 100 ISO, when it gives correct exposure at a certain distance, multiplied by the f-stop The idea that we can figure out the manual flash exposure by the combination of distance and aperture (for a given ISO setting), was covered in these recent topics:

~~Tutorial: How to use the guide number of your flash - Tangents~~

A flash's power is determined by its Guide Number, with low Guide Numbers (GN) indicating a weak or less powerful flash than one with a high GN. For ease of comparison, most flash GNs are rated for an ISO 100 film.

~~Guide Number For Flash Explain - channel-ocedman.com~~

Guide Number simply is the multiplied product of (flash distance x f/stop) for a proper exposure situation (normally specified for ISO 100). For example, if a certain Guide Number were equal to 100 (feet), then it says a correct direct flash exposure is f/20 at 5 feet, or f/5 at 20 feet, or f/10 at 10 feet, etc.

You could not forlorn going once book store or library or borrowing from your friends to open them. This is an no question easy means to specifically get guide by on-line.

~~Guide Number For Flash Explain - orrisrestaurant.com~~

The flash guide number (GN) is a measure of the distance at which the flash can illuminate a subject. The higher the guide number, the greater the distance at which the light from the flash is sufficient for optimal exposure. The formula for calculating the guide number is as follows: Guide number (GN)=distance (meters) × aperture (f-number)

~~Flash Level (Guide Number) - Nikon | Imaging Products~~

This guide number for flash explain, as one of the most effective sellers here will no question be in the midst of the best options to review. Browse the free eBooks by authors, titles, or languages and then download the book as a Kindle file (.azw) or another file type if you prefer.
