An actual ACT Mathematics Test contains 60 questions to be answered in 60 minutes. Read each question carefully to make sure you understand the type of answer required. If you choose to use a calculator, be sure it is permitted, is working on test day, and has reliable batteries. Use your calculator wisely. Solve the problem.

The ACT Test Math Practice Test Questions | ACT

To answer a math word problem on the ACT, you have to translate the provided information into one or more equations and then solve. You can solve some word problems fairly easily. Jotting down the numbers in the problem can be useful to help get you focused and moving in the right direction. The following example word problem shows you how: A charity is holding a lottery to raise money.

ACT Math For Dummies: Cheat Sheet - dummies

ANSWER EXPLANATION: To figure out the answer to this question, you'll first need to know the formula for finding the circumference of a circle. The circumference, C, of a circle is $C = 2\pi r$, where r is the radius of the circle. For the given circle with a radius of 1, the circumference is $C = 2(\pi)(1)$, or $C = 2\pi$.

The 15 Hardest SAT Math Questions Ever

In Math, problems can always be broken down into a series of simpler calculations, but it may be hard to see how right away. For English, more difficult problems function in a similar way: you have to pinpoint which concepts are being tested first. On the Science test, multiple data sources and information overload make problems more challenging.

10 Most Difficult ACT Questions - Magoosh Blog | High School

For example, some word problems in the ACT Math test that would be difficult to approach using a single variable are relatively easy when you use more than one variable. A system of equations is a set of two or more equations that include two or more variables. To solve a system of equations, you need one equation for every variable in the system. This usually means two equations and two variables.
