This book provides glimpses into contemporary research in information systems & technology, learning, artificial intelligence (AI), machine learning, and security and how it applies to the real world, but the ideas presented also span the domains of telehealth, computer vision, the role and use of mobile devices, brain-computer interfaces, virtual reality, language and image processing and big data analytics and applications. Great research arises from asking pertinent research questions. This book reveals some of the authors' "beautiful questions" and how they develop the subsequent "what if" and "how" questions, offering readers food for thought and whetting their appetite for further research by the same authors.

This book constitutes the proceedings of the 7th International Conference on Mobile Computing, Applications, and Services (MobiCASE 2015) held in Berlin, Germany, in November 2015. The 16 full and 4 poster papers were carefully reviewed and selected from 43 submissions, and are presented together with 4 papers from the First Workshop on Situation Recognition by Mining Temporal Information (SIREMETI 2015). The conference papers cover the following topics: intelligent caching, activity recognition and crowdsourcing, mobile frameworks, middleware, interactive applications and mobility.

The primary purpose of this book is to capture the state-of-the-art in Cloud Computing technologies and applications. The book will also aim to identify potential research directions and technologies that will facilitate creation a global market-place of cloud computing services supporting scientific, industrial, business, and consumer applications. We expect the book to serve as a reference for larger audience such as systems architects, practitioners, developers, new researchers and graduate level students. This area of research is relatively recent, and as such has no existing reference book that addresses it. This book will be a timely contribution to a field that is gaining considerable research interest, momentum, and is expected to be of increasing interest to commercial developers. The book is targeted for professional computer science developers and graduate students especially at Masters level. As Cloud Computing is recognized as one of the top five emerging technologies that will have a major impact on the quality of science and society over the next 20 years, its knowledge will help position our readers at the forefront of the field.

Minimize Power Consumption and Enhance User ExperienceEssential for high-speed fifth-generation mobile networks, mobile cloud computing (MCC) integrates the power of cloud data centers with the portability of mobile computing devices. Feed Zone Portables offers 75 all-new, easy, healthy recipes for portable snacks that taste great during exercise. When Dr. Allen Lim left the lab to work with pro cyclists, he found athletes weary of processed bars and gels and the same old pasta. So Lim joined professional chef Biju Thomas to make eating delicious and practical. When the menu changed, no one could argue with the race results. Their groundbreaking Feed Zone Cookbook brought the favorite recipes of the pros to everyday athletes. In their new cookbook Feed Zone Portables, Chef Biju and Dr. Lim offer 75 all-new portable food recipes for cyclists, runners, triathletes, mountain bikers, climbers, hikers, and backpackers. Each real food recipe is simple, delicious during exercise, easy to make—and ready to go on your next ride, run, climb, hike, road trip, or sporting event. Feed Zone Portables expands on the most popular features of The Feed Zone Cookbook with more quick and easy recipes for athletes, beautiful full-color photographs of every dish, complete nutrition data, tips on why these are the best foods for athletes, and time-saving ways on how to cook real food every day. In his introduction to Feed Zone Portables, Dr. Lim shows why real food is a more easily digestible, higher-performance source of energy than prepackaged fuel products. He shows how much athletes really need to eat and drink at different exercise intensities and in cold or hot weather. Because the body burns solid and liquid foods differently, Lim defines a new approach for athletes to drink for hydration and eat real food for energy. With the recipes, ideas, and guidance in Feed Zone Portables, athletes will nourish better performance with real food and learn to prepare their own creations at home or on the go. Feed Zone Portables includes 75 all-new recipes that taste great during exercise: Rice Cakes, Two-Bite Pies, Giddle Cakes, Waffles, Baked Eggs, Sticky Bites, Rice Balls, Ride Sandwiches, Baked Cakes, and Cookies A smart introduction on how real food works better for athletes More than 50 no-fuss gluten-free recipes, including great-tasting cookies and cakes More than 50 vegetarian recipes

Satellite Earth observation (EO) data have already exceeded the petabyte scale and are increasingly freely and openly available from different data providers. This poses a number of issues in terms of volume (e.g., data volumes have increased 10x in the last 5 years); velocity (e.g., Sentinel-2 is capturing a new image of any given place every 5 days); and variety (e.g., different types of sensors, spatial/spectral resolutions). Traditional approaches to the acquisition, management, distribution, and analysis of EO data have limitations (e.g., data size, heterogeneity, and complexity) that impede their true information potential to be realized. Addressing these big data challenges requires a change of paradigm and a move away from local processing and data distribution methods to lower the barriers caused by data size and related complications in data management. To tackle these issues, EO data cubes (EODC) are a new paradigm revolutionizing the way users can store, organize, manage, and analyze EO data. This Special Issue is consequently aiming to cover the most recent advances in EODC developments and implementations to broaden the use of EO data to larger communities of users, support decision-makers with timely and actionable information converted into meaningful geophysical variables, and ultimately unlock the information power of EO data.

This book introduces the reader to the latest innovations in fields such as artificial intelligence, systems biology or surgery, and gives advice on what new technologies to consider for becoming a market leader of tomorrow. Companies generally acquire information on these fields from various sources such as market reports, scientific literature or conference events, but find it difficult to distinguish between mere hype and truly valuable innovations. This book offers essential guidance in the form of structured and authoritative contributions by experts in innovative technologies spanning from biology and medicine to augmented reality and smart power grids. The authors identify high-potential fields and demonstrate the impact of their technologies to create economic value in real-world applications. They also offer business leaders advice on whether and how to implement these new technologies and innovations in their companies or businesses.
