Changing the current business environment and what effect it has on today's students. Revised and updated for a junior or senior level MIS or MBA course, this title will give students what they need to succeed in the emerging digital economy.

This book provides one of the first clear-headed assessments of information technology and organizational transformation. Its virtue is not so much in its recognition of the importance of the subject; speculations on this topic have been rampant for more than a decade. Rather, it is unusual and unusually useful, because it avoids speculation in favor of conceptually coherent accounts grounded in empirical study of actual organizations. The chapters contained in this volume move beyond the superficial glorification of information technology as an extraordinary instrument of social change, and straight to the heart of the mechanisms of change as they play out in everyday organizational life. In the process, they reaffirm that the real story of information technology in organizations is more about people than about technology. Taken together, they provide an important contribution to the intellectual foundations of one of the most interesting developments in decades.

The book presents a simple and attractive framework within which managers can analyze their firm's environment and characteristics, and reflect on the most appropriate way - for them - to "put the puzzle together." It provides the manager and student with an integrated conceptual but pragmatic framework to analyze their situation. Courses examining the role of Information Technology in emerging organizational forms will find a well-grounded conceptual framework, illustrated with in-depth case studies. The book draws from the latest research in industrial organization, strategy, information technology, organizational theory, and leadership. It examines the individual puzzle pieces that have to be put together - strategy, structure, information technology, and leadership, and present the cases of three firms that were equally successful in putting these pieces together, while choosing pieces with dramatically different forms and adjusting them in radically different ways. The three in-depth cases included in the book are international: Oticon is a Danish firm with close to 1500 employees and is a world leader in the manufacture of hearing aids. Li & Fung is another, first established in
