An investigation of the embodied engagement between the playing body and the videogame: how player and game incorporate each other. Our bodies engage with videogames in complex and fascinating ways. Through an entanglement of eyes-on-screens, ears-at-speakers, and muscles-against-interfaces, we experience games with our senses. But, as Brendan Keogh argues in *A Play of Bodies*, this corporal engagement goes both ways; as we touch the videogame, it touches back, augmenting the very senses with which we perceive. Keogh investigates this merging of actual and virtual bodies and worlds, asking how our embodied sense of perception constitutes, and becomes constituted by, the phenomenon of videogame play. In short, how do we perceive videogames? Keogh works toward formulating a phenomenology of videogame experience, focusing on what happens in the embodied engagement between the playing body and the videogame, and anchoring his analysis in an eclectic series of games that range from mainstream to niche titles. Considering smartphone videogames, he proposes a notion of co-attentiveness to understand how players can feel present in a virtual world without forgetting that they are touching a screen in the actual world. He discusses the somatic basis of videogame play, whether games involve vigorous physical movement or quietly sitting on a couch with a controller; the sometimes overlooked visual and audible pleasures of videogame experience; and modes of temporality represented by character death, failure, and repetition. Finally, he considers two metaphorical characters: the "hacker," representing the hegemonic, masculine gamers concerned with control and configuration; and the "cyborg," less concerned with control than with embodiment and incorporation.

Once Upon a Pixel examines the increasing sophistication of storytelling and worldbuilding in modern video games. Drawing on some of gaming's most popular titles, including *Red Dead Redemption 2*, *The Last of Us*, *Horizon Zero Dawn*, and the long-running *Metal Gear Solid* series, it is a pioneering exploration into narrative in games from the perspective of the creative writer. With interviews and insights from across the industry, it provides a complete account of how Triple-A, independent, and even virtual reality games are changing the way we tell stories. Key Features A fresh perspective on video games as a whole new form of creative writing. Interviews with a range of leading industry figures, from critics to creators. Professional analysis of modern video game script excerpts. Insights into emerging technologies and the future of interactive storytelling.

The Present Book Is An Attempt To Analyse Some Of The Outstanding Post-Colonial Writers

Like Arundhati Roy (Booker Prize Winner 1997), Vikram Chandra (Commonwealth Prize Winner 1997), Derek Walcott (Nobel Prize Winner), Margaret Atwood (Booker Prize Winner 2000), Jayanta Mahapatra, Dom Moraes, Nissim Ezekiel, Keki N. Daruwalla, Kamala Das, Shiv K. Kumar, Anita Desai, Shashi Deshpande, Ruskin Bond (All Sahitya Akademi Award Winners) In The Light Of Post-Colonial Theory. Apart From Analysing Individual Authors, An Attempt Has Also Been Made To Show The Trends In Post-Colonial Poetry, Indian English Fiction, Orissan Contribution To Post-Colonial Indian English Literature And Above All, Post-Colonial English Studies In India.

This book offers an engaging and historically informed account of the moral challenge of radically asymmetric violence – warfare conducted by one party in the near-complete absence of physical risk, across the full scope of a conflict zone. What role does physical risk and material threat play in the justifications for killing in war? And crucially, is there a point at which battlefield violence becomes so one-directional as to undermine the moral basis for its use? In order to answer these questions, *Asymmetric Killing* delves into the morally contested terrain of the warrior ethos and Just War Tradition, locating the historical and contemporary role of reciprocal risk within both. This book also engages two historical episodes of battlefield asymmetry, military sniping and manned aerial bombing. Both modes of violence generated an imbalance of risk between opponents so profound as to call into question their permissibility. These now-resolved controversies will then be contrasted with the UAV-exclusive violence of the United States, robotic killing conducted in the absence of a significant military ground presence in conflict theatres such as Pakistan, Yemen, and Somalia. As will be revealed, the radical asymmetry of this latter case is distinct, undermining reciprocal risk at the structural level of war. Beyond its more resolvable tension with the warrior ethos, UAV-exclusive violence represents a fundamental challenge to the very coherence of the moral justifications for killing in war.

Each number includes a classified "Monthly catalogue."

Critical Theory and Animal Liberation is the first collection to approach our relationship with other animals from the critical or "left" tradition in political and social thought. Breaking with past treatments that have framed the problem as one of "animal rights," the authors instead depict the exploitation and killing of other animals as a political question of the first order. The contributions highlight connections between our everyday treatment of animals and other forms of social power, mass violence, and domination, from capitalism and patriarchy to genocide, fascism, and ecocide. Contributors include well-known writers in the field as well as scholars in other areas writing on animals for the first time. Among other things, the authors apply Freud's theory of repression to our relationship to the animal, debunk the "Locavore" movement, expose the sexism of the animal defense movement, and point the way toward a new transformative politics that would encompass the human and animal alike.

Critical Reasoning in Ethics is an accessible introduction that will enable students, through practical exercises, to develop their own skills in reasoning about ethical issues such as: * analysing and evaluating arguments used in discussions of ethical issues * analysing and evaluating ethical concepts, such as utilitarianism * making decisions on ethical issues * learning how to approach ethical issues in a fair minded way Ethical issues discussed include the arguments about abortion, euthanasia, capital punishment, animal rights, the environment and war. The book will be essential reading for philosophy, health, social work and nursing
