This hands-on course is offered as an online integrated EHR and practice management program through McGraw-Hill ' s Connect, an award-winning homework and assessment platform. Connect uses the latest technology to better connect professors to their students, and students to the information and customized resources they need to master a subject. It includes a variety of digital learning tools that enable professors to easily customize courses and allow students to learn and master content and succeed in the course. Students can read and study the content more effectively—spending more time on topics they don ' t know and less time on the topics they do—by using LearnSmart and SmartBook, McGraw-Hill ' s revolutionary adaptive learning technology, available for the first time with the third edition. The Worktext provides an introduction to Greenway Health Prime Suite, an ONC-ATCB-Certified online EHR and practice management interoperable physician-based solution. It covers the key topics for EHR including Meaningful Use, with simulated PrimeSUITE exercises in Connect as the vehicle to demonstrate these topics. Attention is paid to providing the “ why ” behind each task so that the reader can accumulate transferable skills. In this third edition of IEHR, ICD-10-CM is the coding system used in exercises. New key terms have been added to several of the chapters. Each chapter ends with a key feature, Applying Your Skills, to give yet another opportunity for students to use what they have learned in each chapter. Additional Prime Suite exercises have been added as well, bringing the total to 70 exercises. This product will be appealing to HIM programs, HIT programs, MIBC programs and more. All exercises are designated with PM, EHR, HIM tags, or some combination of those three.

Developed as a comprehensive learning resource, this hands-on course for Integrated Electronic Health Records is offered through McGraw Hill's Connect. Connect uses the latest technology and learning techniques to better connect professors to their students, and students to the information and customized resources they need to master a subject. Both the worktext and the online course include coverage of EHRclinic, an education-based EHR solution for online electronic health records, practice management applications, and interoperable physician-based functionality. EHRclinic will be used to demonstrate the key applications of electronic health records. Attention is paid to providing the "why" behind each task, so that the reader can accumulate transferable skills. The coverage is focused on using an EHR program in a doctor's office, while providing additional information on how tasks might also be completed in a hospital setting.

Hamilton, Electronic Health Records, 3e is the top choice for training students using live and up-to-date SpringCharts EHR software. Electronic Health Records 3e builds transferable medical documentation skills with a variety of exercises that walk students through different facets of using an EHR in the medical office. As students progress through SpringCharts, they learn to gather patient information, schedule appointments, record examination information, process lab tests, select codes, and more. Students who complete this course will learn the appropriate terminology and skills to use any EHR software program with minimal additional training. The practical, systematic approach is based on real-world medical office activities.

The New York Times Science Bestseller from Robert Wachter, Modern Healthcare ' s #1 Most Influential Physician-Executive in the US While modern

medicine produces miracles, it also delivers care that is too often unsafe, unreliable, unsatisfying, and impossibly expensive. For the past few decades, technology has been touted as the cure for all of healthcare's ills. But medicine stubbornly resisted computerization — until now. Over the past five years, thanks largely to billions of dollars in federal incentives, healthcare has finally gone digital. Yet once clinicians started using computers to actually deliver care, it dawned on them that something was deeply wrong. Why were doctors no longer making eye contact with their patients? How could one of America's leading hospitals give a teenager a 39-fold overdose of a common antibiotic, despite a state-of-the-art computerized prescribing system? How could a recruiting ad for physicians tout the absence of an electronic medical record as a major selling point? Logically enough, we've pinned the problems on clunky software, flawed implementations, absurd regulations, and bad karma. It was all of those things, but it was also something far more complicated. And far more interesting . . . Written with a rare combination of compelling stories and hard-hitting analysis by one of the nation's most thoughtful physicians, *The Digital Doctor* examines healthcare at the dawn of its computer age. It tackles the hard questions, from how technology is changing care at the bedside to whether government intervention has been useful or destructive. And it does so with clarity, insight, humor, and compassion. Ultimately, it is a hopeful story. "We need to recognize that computers in healthcare don't simply replace my doctor's scrawl with Helvetica 12," writes the author Dr. Robert Wachter. "Instead, they transform the work, the people who do it, and their relationships with each other and with patients. . . . Sure, we should have thought of this sooner. But it's not too late to get it right." This riveting book offers the prescription for getting it right, making it essential reading for everyone — patient and provider alike — who cares about our healthcare system.

"more opportunities for people who want to work in non-clinical health professions. From the front office staff to nurses, doctors, health information professionals, coders, and every worker in between, understanding how health information is transferred and how that information can improve the quality of healthcare is a valuable skill. Those working in healthcare settings will be impacted by electronic health records as they complete their daily tasks. Developed as a comprehensive learning resource, this hands-on course for Integrated Electronic Health Records is offered through McGraw-Hill's Connect. Connect uses the latest technology and learning techniques to better connect professors to their students, and students to the information and customized resources they need to master a subject. Integrated Electronic Health Records complements the online Connect course and is written by authors with extensive backgrounds in health information management/health information technology in the case of M. Beth Shanholtzer, MAEd, FAHIMA, RHIA, and clinical/administrative medical assisting in the case of Amy Ensign, MBA, BHSA, CMA (AAMA), RMA (AMT). Both the worktext and the online course include coverage of EHRclinic, an education-based EHR solution for online electronic health records, practice management applications, and interoperable physician-based functionality. EHRclinic will be used to demonstrate the key applications of electronic health records. Attention is paid to providing the "why" behind each task, so that the reader can accumulate transferable skills. The coverage is focused on using an HER program in a doctor's office, while providing additional information on how tasks might also be completed in a hospital setting. Electronic health records impact a variety of programs in the health professions; thus, this content will be relevant to health information management, health information technology, medical insurance, billing and coding, and medical assisting programs"--
