This New York Times–bestselling book upends conventional thinking about autism and suggests a broader model for acceptance, understanding, and full participation in society for people who think differently. What is autism? A lifelong disability, or a naturally occurring form of cognitive difference akin to certain forms of genius? In truth, it is all of these things and more—and the future of our society depends on our understanding it. Wired reporter Steve Silberman unearths the secret history of autism, long suppressed by the same clinicians who became famous for discovering it, and finds surprising answers to the crucial question of why the number of diagnoses has soared in recent years. Going back to the earliest days of autism research, Silberman offers a gripping narrative of Leo Kanner and Hans Asperger, the research pioneers who defined the scope of autism in profoundly different ways; he then goes on to explore the game-changing concept of neurodiversity. NeuroTribes considers the idea that neurological differences such as autism, dyslexia, and ADHD are not errors of nature or products of the toxic modern world, but the result of natural variations in the human genome. This groundbreaking book will reshape our understanding of the history, meaning, function, and implications of neurodiversity in our world.

A New York Times bestseller Winner of the 2015 Samuel Johnson Prize for non-fiction A groundbreaking book that upends conventional thinking about autism and suggests a broader model for acceptance, understanding, and full participation in society for people who think differently. What is autism? A lifelong disability, or a naturally occurring form of cognitive difference akin to certain forms of genius? In truth, it is all of these things and more—and the future of our society depends on our understanding it. WIRED reporter Steve Silberman unearths the secret history of autism, long suppressed by the same clinicians who became famous for discovering it, and finds surprising answers to the crucial question of why the number of diagnoses has soared in recent years. Going back to the earliest days of autism research and chronicling the brave and lonely journey of autistic people and their families through the decades, Silberman provides long-sought solutions to the autism puzzle, while mapping out a path for our society toward a more humane world in which people with learning differences and those who love them have access to the resources they need to live happier, healthier, more secure, and more meaningful lives. Along the way, he reveals the untold story of Hans Asperger, the father of Asperger's syndrome, whose "little professors" were targeted by the darkest social-engineering experiment in human history; exposes the covert campaign by child psychiatrist Leo Kanner to suppress knowledge of the autism spectrum for fifty years; and casts light on the growing movement of "neurodiversity" activists seeking respect, support, technological innovation, accommodations in the workplace and in education, and the right to self-determination for those with cognitive differences.

Winner of the Samuel Johnson Prize for Non-Fiction 2015 A New York Times bestseller 'NeuroTribes is a sweeping and penetrating history, presented with a rare sympathy and sensitivity... it will change how you think of autism.' - From the foreword by Oliver Sacks What is autism: a devastating developmental disorder, a lifelong disability, or a naturally occurring form of cognitive difference akin to certain forms of genius? In truth, it is all of these things and more - and the future of our society depends on our understanding it. Following on from his ground breaking article 'The Geek Syndrome', Wired reporter Steve Silberman unearths the secret history of autism, long suppressed by the same clinicians who became famous for identifying it, and discovers why the number of diagnoses has soared in recent years. Going back to the earliest autism research and chronicling the brave and lonely journey of autistic people and their families through the decades, Silberman provides long-sought solutions to the autism puzzle, while mapping out a path towards a more humane world in which people with learning differences have access to the resources they need to live happier and more meaningful lives. He reveals the untold story of Hans Asperger, whose 'little professors' were targeted by the darkest social-engineering experiment in human history; exposes the covert campaign by child psychiatrist Leo Kanner to suppress knowledge of the autism spectrum for fifty years; and casts light on the growing movement of 'neurodiversity' activists seeking respect, accommodations in the workplace and education, and the right to self-determination for those with cognitive differences.

This open access book marks the first historical overview of the autism rights branch of the neurodiversity movement, describing the activities and rationales of key leaders in their own words since it organized into a unique community in 1992. Sandwiched by editorial chapters that include critical analysis, the book contains 19 chapters by 21 authors about the forming of the autistic community and neurodiversity movement, progress in their influence on the broader autism community and field, and their possible threshold of the advocacy establishment. The actions covered are legendary in the autistic community, including manifestos such as "Don't Mourn for Us", mailing lists, websites or webpages, conferences, issue campaigns, academic project and journal, a book, and advisory roles. These actions have shifted the landscape toward viewing autism in social terms of human rights and identity to accept, rather than as a medical collection of deficits and symptoms to cure.

"This book is a message from autistic people to their parents, friends, teachers, coworkers and doctors showing what life is like on the spectrum. It's also my love letter to autistic people. For too long, we have been forced to navigate a world where all the road signs are written in another language." With a reporter's eye and an insider's perspective, Eric Garcia shows what it's like to be autistic across America. Garcia began writing about autism because he was frustrated by the media's coverage of it; the myths that the disorder is caused by vaccines, the narrow portrayals of autistic people as white men working in Silicon Valley. His own life as an autistic person didn't look anything like that. He is Latino, a graduate of the University of North Carolina, and works as a journalist covering politics in Washington D.C. Garcia realized he needed to put into writing what so many autistic people have been saying for years; autism is a part of their identity, they don't need to be fixed. In *We're Not Broken*, Garcia uses his own life as a springboard to discuss the social and policy gaps that exist in supporting those on the spectrum. From education to healthcare, he explores how autistic people wrestle with systems that were not built with them in mind. At the same time, he shares the experiences of all types

of autistic people, from those with higher support needs, to autistic people of color, to those in the LGBTQ community. In doing so, Garcia gives his community a platform to articulate their own needs, rather than having others speak for them, which has been the standard for far too long.

Finalist for the 2017 Pulitzer Prize in General Nonfiction An extraordinary narrative history of autism: the riveting story of parents fighting for their children 's civil rights; of doctors struggling to define autism; of ingenuity, self-advocacy, and profound social change. Nearly seventy-five years ago, Donald Triplett of Forest, Mississippi, became the first child diagnosed with autism. Beginning with his family's odyssey, *In a Different Key* tells the extraordinary story of this often misunderstood condition, and of the civil rights battles waged by the families of those who have it. Unfolding over decades, it is a beautifully rendered history of ordinary people determined to secure a place in the world for those with autism—by liberating children from dank institutions, campaigning for their right to go to school, challenging expert opinion on what it means to have autism, and persuading society to accept those who are different. It is the story of women like Ruth Sullivan, who rebelled against a medical establishment that blamed cold and rejecting "refrigerator mothers" for causing autism; and of fathers who pushed scientists to dig harder for treatments. Many others played starring roles too: doctors like Leo Kanner, who pioneered our understanding of autism; lawyers like Tom Gilhool, who took the families' battle for education to the courtroom; scientists who sparred over how to treat autism; and those with autism, like Temple Grandin, Alex Plank, and Ari Ne'eman, who explained their inner worlds and championed the philosophy of neurodiversity. This is also a story of fierce controversies—from the question of whether there is truly an autism "epidemic," and whether vaccines played a part in it; to scandals involving "facilitated communication," one of many treatments that have proved to be blind alleys; to stark disagreements about whether scientists should pursue a cure for autism. There are dark turns too: we learn about experimenters feeding LSD to children with autism, or shocking them with electricity to change their behavior; and the authors reveal compelling evidence that Hans Asperger, discoverer of the syndrome named after him, participated in the Nazi program that consigned disabled children to death. By turns intimate and panoramic, *In a Different Key* takes us on a journey from an era when families were shamed and children were condemned to institutions to one in which a cadre of people with autism push not simply for inclusion, but for a new understanding of autism: as difference rather than disability.

ADHD. dyslexia. autism. the number of illness categories listed by the American Psychiatric Association has tripled in the last fifty years. With so many people affected, it is time to revisit our perceptions on this "culture of disabilities." Bestselling author, psychologist, and educator Thomas Armstrong illuminates a new understanding of neuropsychological disorders. He argues that if they are a part of the natural diversity of the human brain, they cannot simply be defined as illnesses. Armstrong explores the evolutionary advantages, special skills, and other positive dimensions of these conditions. A manifesto as well as a keenly intelligent look at "disability," *The Power of Neurodiversity* is a must for parents, teachers, and anyone who is "differently brained."

A sensory portrait of an autistic mind From childhood, Laura James knew she was different. She struggled to cope in a world that often made no sense to her, as though her brain had its own operating system. It wasn't until she reached her forties that she found out why: Suddenly and surprisingly, she was diagnosed with autism. With a touching and searing honesty, Laura challenges everything we think we know about what it means to be autistic. Married with four children and a successful journalist, Laura examines the ways in which autism has shaped her career, her approach to motherhood, and her closest relationships. Laura's upbeat, witty writing offers new insight into the day-to-day struggles of living with autism, as her extreme attention to sensory detail—a common aspect of her autism—is fascinating to observe through her eyes. As Laura grapples with defining her own identity, she also looks at the unique benefits neurodiversity can bring. Lyrical and lush, *Odd Girl Out* shows how being different doesn't mean being less, and proves that it is never too late for any of us to find our rightful place in the world.

Shortlisted for the 2019 Mark Lynton History Prize A groundbreaking exploration of the chilling history behind an increasingly common diagnosis. Hans Asperger, the pioneer of autism and Asperger syndrome in Nazi Vienna, has been celebrated for his compassionate defense of children with disabilities. But in this groundbreaking book, prize-winning historian Edith Sheffer exposes that Asperger was not only involved in the racial policies of Hitler's Third Reich, he was complicit in the murder of children. As the Nazi regime slaughtered millions across Europe during World War Two, it sorted people according to race, religion, behavior, and physical condition for either treatment or elimination. Nazi psychiatrists targeted children with different kinds of minds—especially those thought to lack social skills—claiming the Reich had no place for them. Asperger and his colleagues endeavored to mold certain "autistic" children into productive citizens, while transferring others they deemed untreatable to Spiegelgrund, one of the Reich's deadliest child-killing centers. In the first comprehensive history of the links between autism and Nazism, Sheffer uncovers how a diagnosis common today emerged from the atrocities of the Third Reich. With vivid storytelling and wide-ranging research, *Asperger's Children* will move readers to rethink how societies assess, label, and treat those diagnosed with disabilities.
