Notice that the side lengths of each rectangle are the base and height of the parallelogram. Even though the two rectangles have different side lengths, the products of the side lengths are equal, so they have the same area! And both rectangles have the same area as the parallelogram. We often use letters to stand for numbers. If

## ~~Parallelograms And Rectangles Answer Key~~

In two-dimensional geometry, a parallelogram is a quadrilateral (a four-sided figure) with two pairs of congruent sides and two pairs of congruent angles. The following practice questions ask you to use the properties of parallelograms to find missing angles and variables. Practice questions In parallelogram MATH, diagonals intersect at E. Use the figure and the [ ]
