A network switch (also called switching hub, bridging hub, and, by the IEEE, MAC bridge) is networking hardware that connects devices on a computer network by using packet switching to receive and forward data to the destination device.. A network switch is a multiport network bridge that uses MAC addresses to forward data at the data link layer (layer 2) of the OSI model.

## **Network switch - Wikipedia**

I've been using a Windows laptop for the last couple of years, but am considering switching back to Mac (MacBook Air or Pro) and getting an iPhone SE at the same time. Windows 10's constant, slow and buggy updates are unbearable at times. Basically my questions are:

Mac malware does exist—it's naive to think otherwise. To protect your system from malware, it's best to avoid unsigned apps, favor the Mac App Store, and steer clear of pirated or cracked software. You don't need an antivirus as your Mac already runs a low-level one called XProtect (you can learn more about it here).
