The Fourier transform is a powerful tool for analyzing signals and is used in everything from audio processing to image compression. SciPy provides a mature implementation in its `scipy.fft` module, and in this tutorial, you'll learn how to use it. The `scipy.fft` module may look intimidating at first since there are many functions, often with similar names, and the documentation uses a lot of ...

Python signal handlers are always executed in the main Python thread of the main interpreter, even if the signal was received in another thread. This means that signals can't be used as a means of inter-thread communication. You can use the synchronization primitives from the `threading` module instead.
